## Health inequities for MNM according to educational level

### Indicators with a focus on health inequities for the Maternal Near Miss (MNM)

This report aims to show the indicators that trace the continuum of care for the prevention and management of the Maternal Near Miss. It includes from the implementation of basic and essential preventive actions to the effectiveness of the management of severe obstetric complications

Disaggregation by key inequity stratifiers (Maternal age, ethnicity, level of education) and events of interest to maternal health (Obstetric bleeding, Hypertensive disorders and Infectious disorders)

For further information on the conceptual framework of the dashboard see: 1. the Dashboard Concept Paper, 2. The technical data sheets of the indicators and 3. the guide for the interpretation of the selected inequity metrics.
